24/7 AI resolves order queries with live WooCommerce and DHL tracking data

BUSINESS PROBLEM

80% of support tickets are 'where is my order?' questions. This agent fetches live WooCommerce order data and real DHL tracking in real time, resolves the query autonomously, and only escalates genuinely complex cases — reducing support cost while cutting response time from hours to seconds.

n8n CANVAS — actual workflow screenshot

INPUT / OUTPUT — exact n8n JSON format

INPUT — Chat message — customer order query	OUTPUT — Agent response — live order status with tracking
<pre>{ "message": "Hi, where is my order? I ordered last Tuesday", "email": "customer@email.com", "session_id": "chat-session-8847", "channel": "website_chat" }</pre>	<pre>{ "json": { "response": "Your order #8847 (Running Shoes X200, Size 10) shipped from our warehouse on 14 Jun. Currently at DHL City Hub. Expected delivery: Thursday 19 Jun, 09:00-13:00. Tracking: 1234567890.", "order_id": 8847, "order_status": "shipped", "dhl_status": "In Transit", "eta": "2024-06-19", "escalated": false, "resolution_ms": 1840 } }</pre>

STEP-BY-STEP — what each node does

#	WHAT HAPPENS	PRACTICAL DETAIL
1	■ Chat Trigger — customer message	Message arrives from website chat or WhatsApp Business: {message, email, session_id, channel}.

#	WHAT HAPPENS	PRACTICAL DETAIL
2	■ IF — email provided?	Routes: email present → look up customer. No email → politely requests: 'Could I have your order email?'
3	■ IF — customer found in WooCommerce?	GET /wp-json/wc/v3/customers?email=X. 404 response → 'Email not recognised, please try your account email.'
4	■ Merge Orders — combine all order lines	Multiple active orders fetched and merged into flat list with status per order line item.
5	■ IF — DHL tracking data present?	Checks if shipment has tracking number. Yes → live DHL API call. No → shows WooCommerce order_status only.
6	■ Extract Tracking Data — parse DHL	Extracts: current_location, estimated_delivery, last_scan_event, delivery_attempt_count from DHL response.
7	■ Merge Order and Tracking — full context	Joins WooCommerce order details with live DHL tracking status into a complete customer context object.
8	↓ Split Out — per order line	Each order line split for individual status check and per-item reply formatting.
9	■ Aggregate — rebuild customer view	Re-aggregates into structured response: all orders with status, tracking, and ETA in one clean message.
10	■ Window Buffer Memory — 10 turns	Customer can ask 'What about my other order?' and agent maintains full conversation context.

CREDENTIALS REQUIRED

CREDENTIAL	WHERE TO GET IT	n8n TYPE
WooCommerce API Key + Secret	WP Admin → WooCommerce → Settings → Advanced → REST API → Add key	WooCommerce API
DHL API Key	developer.dhl.com → Register → Shipment Tracking API	HTTP Header Auth
OpenAI API Key	platform.openai.com/api-keys	OpenAI API

SAMPLE RUN — what this workflow processed and produced

Scenario	An online fashion retailer handles 80-120 customer support queries per day. 70% are order status questions. Support staff previously spent 3-4 hours per day copy-pasting order and tracking information.
Input received	Customer sent: 'Hi, where is my order? I ordered last Tuesday.' Email: customer@email.com. Chat widget on website.
What the workflow found	WooCommerce lookup found order #8847 for this email: Running Shoes X200 Size 10, shipped June 14. DHL API returned current status: In Transit at City Hub, ETA June 19, 09:00-13:00.
Output produced	Full answer with order number, item description, current DHL location, and delivery window returned in 1.84 seconds. Customer confirmed satisfied and closed chat. Zero agent involvement required.
