

## #24 Brand-Consistent 9:16 AI Image Generator

Content / AI  
Image  
Generation

Content topic and brand guidelines to on-brand Reels images via DALL-E 3

### BUSINESS PROBLEM

Social media managers spend hours creating brand-consistent images. This workflow reads brand guidelines and SEO keywords from Airtable, generates optimised DALL-E 3 prompts enforcing brand colours and style, and delivers 5 ready-to-post 9:16 image variants in 3 minutes.

### n8n CANVAS — actual workflow screenshot

### INPUT / OUTPUT — exact n8n JSON format

#### INPUT — Manual trigger — content brief for image generation

```
{
  "topic": "5G network infrastructure",
  "tone": "professional",
  "platform": "instagram_reels",
  "post_type": "educational",
  "num_variants": 5
}
```

#### OUTPUT — DALL-E 3 generated image metadata — saved to Airtable

```
{
  "json": {
    "scene_id": "scene-003",
    "prompt_used": "Futuristic 5G antenna array, electric blue (#00B4D8) light beams, navy background, minimalist tech aesthetic, no text, 1080x1920 portrait, photorealistic editorial",
    "dalle_url": "https://oaidalleapiprodscus.blob.core.windows.net/...",
    "asset_id": "rec4xKp2mNq7Abc1",
    "dimensions": "1080x1920",
    "generated_at": "2024-06-15T10:14:22Z"
  }
}
```

### STEP-BY-STEP — what each node does

| #  | WHAT HAPPENS                                 | PRACTICAL DETAIL                                                                                       |
|----|----------------------------------------------|--------------------------------------------------------------------------------------------------------|
| 1  | ■ Manual Trigger — content brief             | {topic, tone, platform, post_type, num_variants} provided as trigger input parameters.                 |
| 2  | ■ Set Guidelines — initialise brand defaults | Loads: primary_color hex, secondary_color, logo_placement, forbidden_elements list.                    |
| 3  | ■ Airtable — fetch brand kit                 | Reads: {brand_colors[], style_descriptors[], do_not_show_list[], past_best_performers}.                |
| 4  | ■ Airtable — fetch SEO keywords              | Retrieves: {keyword, search_volume, relevance_score} for this content category.                        |
| 5  | ■ Remove Duplicates — clean keyword list     | Deduplicates across brand and SEO keyword sources. Removes conflicts.                                  |
| 6  | ■ Keyword Filter — relevance threshold       | Keeps: search_volume above 1,000 AND relevance_score above 0.7.                                        |
| 7  | ■ Airtable — fetch past content library      | Retrieves what imagery styles performed best for this topic and audience.                              |
| 8  | ↑ Split Out + Limit — top 5 scenes           | Each content piece split, limited to 5 DALL-E 3 calls to control API cost.                             |
| 9  | ■ OpenAI Script Prep — DALL-E 3 prompt       | GPT-4 generates optimised prompt: brand colours enforced, no-text rule, 9:16 aspect ratio, quality:hd. |
| 10 | ↑ Split Out Scenes — parallel generation     | Each scene prompt dispatched to DALL-E 3 API simultaneously. 5 images in ~30 seconds.                  |

## CREDENTIALS REQUIRED

| CREDENTIAL                | WHERE TO GET IT                                        | n8n TYPE            |
|---------------------------|--------------------------------------------------------|---------------------|
| OpenAI API Key — DALL-E 3 | platform.openai.com — DALL-E 3 requires GPT-4 API tier | OpenAI API          |
| Airtable Personal Token   | airtable.com/create/tokens                             | Airtable API        |
| Google Drive OAuth2       | console.cloud.google.com — for saving generated images | Google Drive OAuth2 |

## SAMPLE RUN — what this workflow processed and produced

|                         |                                                                                                                                                                   |
|-------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Scenario                | A B2B tech marketing team publishes 5 Instagram Reels per week. Designer was spending 45-60 minutes per image ensuring brand consistency.                         |
| Input received          | Manual trigger: topic=5G network infrastructure, platform=instagram_reels, post_type=educational. Brand kit: navy #0D1B2A, teal #00B4D8, minimalist tech style.   |
| What the workflow found | 8 SEO keywords for 5G content retrieved. After filter: 5 kept. Past content showed antenna imagery outperformed abstract data visualisations 2.3x for this topic. |
| Output produced         | 5 DALL-E 3 images generated in 28 seconds. All 9:16, all brand-colour compliant, no text overlays. Marketing team selected variant 3. Cost: \$0.20 total.         |
